# Outline

- Introduction
- Opto-package prototypes
- Opto-hybrid board design
- Cost and schedule summary
- Conclusions

## **ATLAS Pixel Opto-link**

## Opto-package

- 2 fibres + VCSEL + PIN
- coupled VCSEL power > 300  $\mu$ W @ 10 mA
- VCSEL tolerance:
  - 50  $\mu$ m in z (along fibre)
  - 25 µm in r (transverse to fibre)

## **Opto-package Designs**

- Marconi
  - ☆ 8 silicon/alumina pieces
  - $\Rightarrow$  use silicon mirror for 45<sup>0</sup> light reflection
  - ☆ high cost
- Taiwan
  - ☆ 3 G-10 pieces
  - $\Rightarrow$  cleave fibre at 45<sup>0</sup>
  - ☆ fibers permanently attached: need voliton connector
  - ☆ low cost
- OSU
  - ☆ 2 pieces
  - ☆ cap with fibers can be attached to package at end of module assembly
  - ☆ low cost

## OSU Design

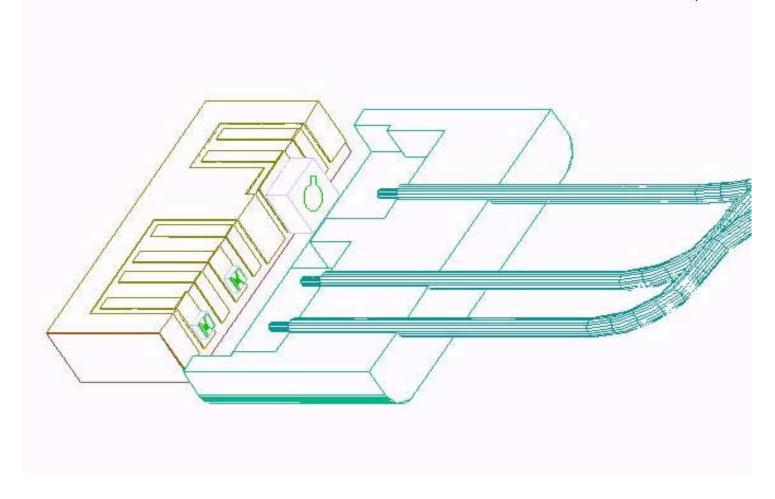

- connector concept design
  - ☆ use precisely fabricated cap and base for alignment
  - ☆ simple two-piece design for mass production and cost reduction
- cap

☆ 2 holes for fibers

#### • base

☆ deposit gold traces for wire bonding, VCSEL and PIN placements

#### **Base and Cap**

## Cap and Base Prototypes

- produced caps and bases (rounded corners) using machinable ceramic
  - ☆ material tested: aluminum silicate and macor
  - ☆ difficult to obtain consistent precision
  - ⇒ redesign base with square corners for ease of fabrication by Hybrid-Tek
    ☆ alumina sheet ground to proper thickness and cut into strips
    ☆ have produced bases with precision within specification
    ☆ 3D traces have good connectivity
  - ⇒ fabricate cap with Ultem (polyetherimide) for radiation tolerance (10 Grad)
    ☆ use manual micro mold injection to save development time
    ☆ can fabricate several quality caps per hour

### Prototype Result

- produced 10 packages
- VCSELs have fast rise and fall time: < 1 ns
- PINs have good responsitivity: 0.5 A/W
- coupled power > 300 µW in both VCSELs simultaneously for 8 packages with different combinations of bases and caps
   ⇒ demonstrated feasibility of fabricating high precision caps and bases
- no cross-talk between VCSEL and PIN above 20 μA

#### **Cap with Precisely Fabricated Cavity**

#### Base with PIN and VCSELs

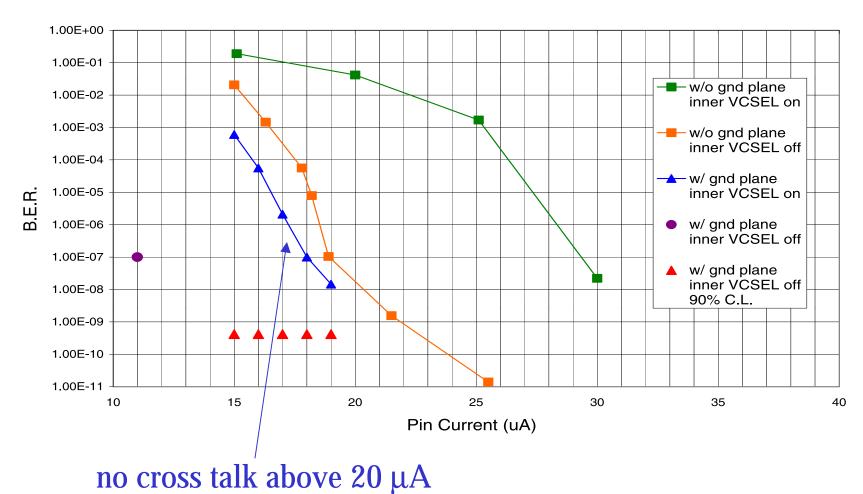

### **Completed Opto-package**

#### **BER/Crosstalk Measurement with DORIC and VDC**

**US ATLAS Review** 

B.E.R. O.S.U. OPTOPACKAGES

US ATLAS Review

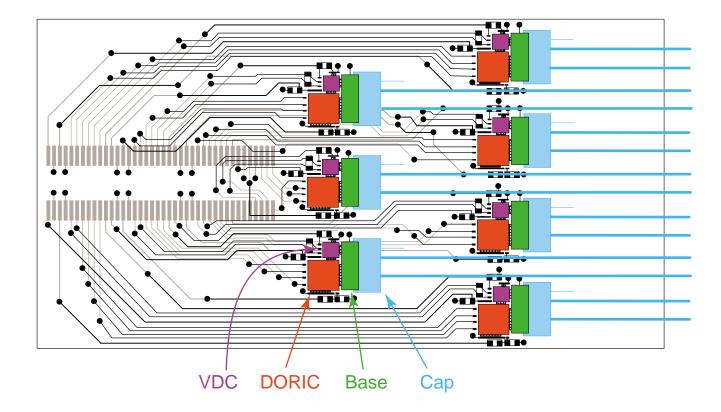

## Summary on Opto-package

- principle of two-piece connector concept demonstrated
  - ☆ precision bases with 3D traces of good connectivity fabricated
  - ☆ precision caps fabricated
  - ⇒ packages produce optical power above specification
  - → negligible cross-talk between VCSEL and PIN
- ability to produce precise die placement jig is a concern
  required six trials (one week) for current jig

## Opto-hybrid Board

- convert optical signal into electrical signal and vice verse
- contains 6 sets of opto-pack, VDC, and DORIC
- electrical signal to/from module channel through 60-pin connector
- layout to serve 7 modules is ready
  - ☆ will convert to serve 6 modules
  - ☆ first submission will use FR-4 for cost saving
  - ☆ 2nd and 3rd prototypes will use BeO
- board is compatible with Taiwan opto-pack

### **Opto-hybrid**

#### Conclusions

- principle of fabrication of opto-pack demonstrated
- no major technical challenge in opto-hybrid board fabrication
  - ☆ compatible with Taiwan opto-pack
  - ☆ experience in opto-pack prototyping is very useful for mounting opto-packs on opto-hybrid board
