Optional Homework Set *"Integration Using Residues"*

Physics 835, Deadline – Wednesday, February 6, 2008

The whole problem set is worth 10 pts to make up for points lost in the mandatory homeworks.

Perform the following integrals using residues (a, b are real, $a \neq b$, $\epsilon > 0$):

$$\int_{-\infty}^{\infty} dx \, \frac{1}{(x - a - i\epsilon)(x - b + i\epsilon)} \tag{1}$$

$$\int_{-\infty}^{\infty} dx \, \frac{1}{(x - a - i\epsilon)(x - b - i\epsilon)} \tag{2}$$

$$\int_{-\infty}^{\infty} dx \, \frac{e^{i\,x}}{(x - a - i\epsilon)(x - b - i\epsilon)} \tag{3}$$

$$\int_{-\infty}^{\infty} dx \, \frac{1}{x - a - i\epsilon} \, \mathrm{P} \frac{1}{x - b} \tag{4}$$

$$\int_{-\infty}^{\infty} dx \, \left(\mathrm{P} \frac{1}{x - a} \right) \left(\mathrm{P} \frac{1}{x - b} \right) \tag{5}$$

$$\int_{-\infty}^{\infty} dx \, \frac{1}{(x^2 + a^2)(x^2 + b^2)} \tag{6}$$

$$\int_{-\infty}^{\infty} dx \, \frac{\cos x}{x^2 + a^2} \tag{7}$$

$$\int_{-\infty}^{\infty} dx \, \frac{\sin x}{x} \tag{8}$$
