

l-UNCOUPLING AND ROTATIONAL STRUCTURE IN THE HIGH-RYDBERG STATES OF HCO

HARTMUT G. HEDDERICH, ERIC E. MAYER and EDWARD R. GRANT, *Department of Chemistry, Purdue University, West Lafayette, IN 47907-1393.*

Rotational structure associated with autoionizing states of HCO in the $n = 13$ complex is analyzed for core vibrational states (010) and (001). *l*-uncoupling is observed.
