

THE ENERGY LEVELS OF URANIUM V

SCOTT R. BROZELL and RUSSELL M. PITZER, *Department of Chemical Physics, The Ohio State University, Columbus, OH 43210.*

Spin-orbit configuration-interaction calculations are performed on U^{4+} . Uranium is modeled with relativistic effective core potentials and Gaussian cc-pVDZ and cc-pVTZ basis sets. This $5f^2$ ion has been studied extensively, and the calculations are compared with the experimental spectrum^a.
