

MICROWAVE SPECTROSCOPY OF ARGON-THIIRANE AND NEON-THIIRANE COMPLEXES

G. WŁODARCZAK, S. KASSI, D. PETITPREZ, *Laboratoire de Physique des Lasers, Atomes et Molécules and CERLA, Université des Sciences et Technologies de Lille, F-59655 Villeneuve d'Ascq, France.*

The rotational spectra of Ar-thiirane (or ethylene sulfide C_2H_4S) and Ne-thiirane van der Waals complexes have been measured with a MWFT spectrometer between 6 and 20 GHz. The analysis of the spectra of the isotopic species and the determination of the geometrical structure of these complexes are discussed.
