

Physics 6810: Assignment #4

Your projects will be due by midnight on Monday, May 1. You are to hand in all relevant files via BuckeyeBox (e.g., like you do for homework). Put your project files inside a subfolder of your main 6810 folder named **Project**. It is highly recommended that you turn in project components earlier than the due date to get feedback while there's time for corrections.

1. Please add to your Project folder by April 10 a text file with a (brief!) progress report on your project. In particular, include a description of your project goal, a list of possible subgoals, and where you are on each one. Subgoals are things like: write a test code, convert a code from a different language, do an error analysis, etc. The project for 6810 can be a piece of a bigger project (that doesn't have to be completed this semester) or can be self-contained. You are free to adjust the project goal and subgoals as you proceed, but I want to have a rough idea where you're heading before it's due! (Please keep me posted on any such adjustments.)
