

Midterm II Announcements

- **Midterm II will concentrate on circuits (Chaps. 26-28) and related physics. In particular...**
 - **...there may also be a substantial problem on electric potential (Chap. 25). As you've seen, this subject is crucial to the analysis of circuits and, hopefully, you've gained more insight.**
 - **Magnetic fields (Chap. 29) will not be on the exam. *This is a change from the syllabus.***
 - **All solutions relevant to Midterm II are posted including the sample exams. Don't look at the samples until you've tried to work them.**
- Due to family matters, I may not be here Monday and Tuesday. The out-of-class review session will be cancelled in that case. This will be announced Monday in lecture. I will try to provide substantial extra time for you on Wednesday if this happens.**
